

WEBSITE REQUIREMENTS & WORK PLAN

Qawe Investment Company Limited

A clear, credible digital home for mineral sourcing, commodities trading and customer enquiries.

This document explains what the website is designed to do, how a customer moves through it, and what is needed to take the project from a strong working version to a fully approved company website.

Prepared for

Qawe Investment Company Limited

Prepared

September 2026

Office

Ununio, Dar es Salaam, Tanzania

A website that makes the business easy to understand.

The website is being built as a premium, trustworthy first point of contact for buyers, partners and suppliers. Its job is simple: explain what Qawe supplies, show how the process works, and make it easy for the right person to start a serious conversation.

“We source and supply minerals and commodities to customer requirements, while managing quality verification, documentation, logistics, export, shipping and final delivery.”

The website should feel professional without making promises that cannot be supported. Where a fact, certification, location, grade, quantity or project detail has not been approved, the copy remains careful and invites a direct conversation.

COMPANY INFORMATION TO PRESENT

18+

YEARS OF COMPANY
EXPERIENCE

120+

CUSTOMERS AROUND THE
WORLD

TZ

OFFICE IN DAR ES SALAAM

WHO THE SITE SERVES

Serious commercial visitors

Industrial buyers, precious-metal enquiries, procurement teams, logistics partners, suppliers and business contacts who need a clear route to the company.

THE INTENDED FEELING

Premium, direct and credible

Black, gold and warm off-white create a refined identity, while short copy and visible contact paths keep the experience practical.

BUSINESS CATEGORIES

Industrial minerals

Precious metals

Sourcing

Verification

Export & shipping

Final delivery

Every section has a clear job.

The navigation is intentionally simple. A visitor can understand the company in one visit, move from a commodity to a relevant enquiry, and reach the team through email, phone or WhatsApp.

HOME

The first impression.

Positioning statement, company proposition, key calls to action, selected commodities and the route from origin to delivery.

ABOUT

Who Qawe is.

Company approach, working principles, experience, worldwide customer reach and a visible connection to the leadership team.

COMMODITIES

What Qawe supplies.

A catalogue of industrial minerals and precious metals. Selecting a material opens a clear explanation and a path to request an RFQ.

SERVICES

How the work is done.

Sourcing, verification, documentation, logistics, export, shipping and final delivery explained as one connected service.

OPERATIONS

How material moves.

An origin-to-destination story that helps buyers see the handovers and practical steps involved.

RESPONSIBILITY

What builds confidence.

Clear documentation, quality verification, practical communication and a careful approach to movement.

MEDIA & NOTES

What sits behind the deal.

Company or mineral imagery, short notes and the approved company profile when supplied.

LEADERSHIP

Who visitors can reach.

Director, PR and Financial contacts with phone, WhatsApp and enquiry actions.

CONTACT

The business handoff.

A structured RFQ form, official email, phone, WhatsApp and office location.

NAVIGATION PRINCIPLE

A customer should never have to guess where to go next. Every major section ends with a practical invitation to ask, discuss or enquire.

From first impression to a qualified RFQ.

The website is designed around a natural customer journey. It gives enough information to build confidence, without forcing a visitor through a long or technical process.

01 Discover

A buyer arrives through search, a shared link, a referral or WhatsApp and immediately understands that Qawe works with minerals and commodities.

02 Explore

The buyer reviews the commodity catalogue, selects a material and reads a plain-language explanation of its typical use and supply conversation.

03 Understand

The services and operations sections explain the route: sourcing, verification, documentation, logistics, export, shipping and final delivery.

04 Choose a contact path

The buyer can email the team, call a listed contact, continue on WhatsApp, or open the RFQ form.

05 Send a useful brief

The RFQ captures material, company, contact details, quantity, destination, timing and the buyer's requirement.

06 Move into a human conversation

The prepared enquiry opens the visitor's email application and addresses the official Qawe mailbox. The team can then confirm availability and next steps directly.

DIRECT CHAT GUIDANCE

"Ask QAWÉ" is a simple browser-based guidance tool. It provides predefined answers about commodities, services, delivery, responsibility and enquiries. It does not make up answers or replace the team.

The system requirements in plain language.

RESPONSIVE WEBSITE	The website must work comfortably on phones, tablets and desktop screens, with readable text, usable buttons and accessible forms.
COMMODITY DETAILS	Each material must have a clear name, category, explanation, typical use and a direct route to an RFQ. Gold is shown under precious metals; the other listed materials are shown under industrial minerals.
RFQ EXPERIENCE	The form should collect enough information for a useful first response: name, company, email, phone, material, estimated volume, destination, timing and requirement notes.
OFFICIAL CONTACT	All important contact actions must point to the official Qawe details: email, phone, WhatsApp contacts and Ununio, Dar es Salaam office.
HUMAN HANDOFF	The site must make it obvious that final availability, documentation, commercial terms and delivery details are confirmed by the company team.
SEARCH VISIBILITY	Pages should have useful titles, descriptions, structured company information and clear language around mineral sourcing and supply.
ANALYTICS READINESS	Meaningful actions such as commodity views, RFQ starts, RFQ submissions, WhatsApp clicks and email clicks should be measurable once a third-party analytics provider is selected.
PERFORMANCE	Images should be compressed, motion should remain restrained, and the site should continue to work when visitors have slower connections.
CONTENT SAFETY	The website must not publish unapproved certifications, reserves, grades, quantities, countries, project claims or compliance statements.

TECHNICAL APPROACH

React + Vite Fast, responsive frontend foundation.	Static-first No database, AI or complex backend for release one.	Email + WhatsApp Direct handoff to the company team.	Ready to grow CMS, CRM or quotation tools can come later.

What is already in the working website.

- ✓ Premium black-and-gold corporate visual identity.
- ✓ Qawe elephant logo included in the website.
- ✓ Responsive homepage with clear positioning and calls to action.
- ✓ Industrial minerals catalogue: Copper Cathode, Copper Concentrate, Copper Wire, Cobalt, Tantalite, Coltan and Sulfur.
- ✓ Precious metals category with Gold.
- ✓ Commodity detail pop-ups with descriptions, typical uses and enquiry actions.
- ✓ Individual commodity detail pages for search and sharing.
- ✓ Services story covering sourcing, verification, documentation, logistics, export, shipping and final delivery.
- ✓ Operations and responsibility sections written with careful, supportable language.
- ✓ Leadership contacts for the Director, PR and Financial roles.
- ✓ Official email, phone, WhatsApp and office location added.
- ✓ Improved RFQ form that prepares a structured email to the official mailbox.
- ✓ Predefined “Ask QAWÉ” website guidance chat with enquiry handoff.
- ✓ SEO metadata and company structured data added.
- ✓ Analytics event bridge prepared for a future third-party provider.

IMPORTANT NOTE

The company profile PDF is not yet included.

The website currently shows “Company profile PDF — coming soon” so that an unapproved document is not presented to customers. Once the approved PDF is supplied, it can be added as the official download.

What the customer should confirm.

The working website is ready for review. Before final publication, the following items should be checked by the company so that the public version reflects approved information.

- ✓ Confirm that the company name, roles, contact numbers and email are correct.
- ✓ Confirm the published statement of 18+ years of experience and 120+ worldwide customers.
- ✓ Confirm the final list of commodities and the wording used for each description.
- ✓ Upload the approved Qawe company profile PDF.
- ✓ Replace temporary generated imagery with approved company, mineral, operations or logistics photographs when available.
- ✓ Confirm any approved operating countries, ports, certifications, licenses or responsible-sourcing statements before publication.
- ✓ Select a third-party analytics provider. Plausible is a good fit for a lightweight, privacy-focused corporate site; Google Analytics 4 is suitable if more detailed reporting is preferred.
- ✓ Publish the approved website and monitor real customer enquiries.
